

1. Remove Tough, Smelly, Lingering Odors with the Odor Absorbing Environmental Air Sponge

Non-Toxic, Non-Polluting, Ecologically and Environmentally Friendly, Biodegradable, Odorless and Harmless if Ingested

Our senses are bombarded by offensive odors from a variety of sources, like body odors, pet odors, food odors, smoke odors and musty odors. Our initial reaction to odors is the irritation to our sense of smell. The more important problem is the damage odor contaminants may do to our respiratory system. Breathing air contaminants causes 100% of all respiratory diseases.

Obviously the best way to get rid of an odor is to remove and clean the odor causing substance. But some odors are very difficult to eliminate even with washing, since any porous material like wood, drywall, carpeting, etc. holds the odor molecules inside.

Environmental Air Sponge Odor Eater to the Rescue!

The Environmental Odor Absorber Air Sponge is a technological breakthrough in the world of odor elimination and odor control to enhance air quality. The Environmental Odor Absorber Air Sponge is an environmentally safe product that eliminates virtually all odors and pollutants from the indoor air in your home, office, car, RV or boat, as well as lingering effects in clothing, curtains, drapes, carpets and upholstery. The Environmental Air Sponge acts like an odor eater to absorb pollutants and offensive odors like:

- | | | |
|---------------------|-------------------|-----------------|
| • Animal Odors | • Detergents | • Pet Odors |
| • Asphalt Fumes | • Diaper Odors | • Poultry Odors |
| • Bathroom Smells | • Exhaust Fumes | • Rancid Oils |
| • Body Odors | • Fecal Odors | • Sewer Gases |
| • Burned Food Odors | • Fish Odors | • Skunk Odors |
| • Carpet Odors | • Flood Odors | • Smoke Odors |
| • Charred Materials | • Food Odors | • Solvent Odors |
| • Cooking Odors | • Furniture Odors | • Tobacco Smoke |
| • Dead Animals | • Garbage Odors | • Varnish Odors |
| • Decaying Odors | | |
| | • Garlic Odors | |
| | • Gasoline Odors | |
| | • Hospital Odors | |
| | • Hunting Odors | |
| | • Kitchen Odors | |
| | • Medicinal Odors | |
| | • Mildew Odors | |
| | • Onion Odors | |
| | • Paint Odors | |

The instant odor absorbing air sponges and air sprays are human safe and environmentally friendly. They are the perfect replacement for all toxic deodorants, perfumes and other odor-masking products. Also, they are very efficient when used with any type of commercial atomizing system .

The Most Effective Odor Eliminator for the Home or Office

How the Environmental Air Sponge Odor Eater Works

Conventional air fresheners usually only mask unpleasant smells with perfume. This product is not a deodorant; it actually absorbs and eliminates offensive odors and microscopic pollutants

The Environmental Air Sponge contains a solid soap gel coated with activated charcoal. When the container is opened, the two components work together to dissipate a stream of "lighter than air" molecules into the environment, interacting with and neutralizing odor and pollutant molecules. This creates a purer, fresher, healthier air quality.

How Much Is Needed?

As an odor eliminator for ordinary room conditions -- humidity, mildew, tobacco smoke, food odors, foot odors, pet odors, litter box odors, etc. -- one 8 oz. container will neutralize and eliminate most odors in a 300 square foot area.

- For areas larger than 300 sq. ft. use two or more 8 oz. containers or use the larger sizes.
- For pet stores, animal clinics, paint odors or solvent fumes, double the quantity.
- For fire restoration, triple the quantity.

The Environmental Odor Absorber Air Sponge eliminates virtually all odors and pollutants from the indoor air in your home, office, car, RV or boat, as well as lingering effects in clothing, curtains, drapes, carpets and upholstery. We have been selling and using the odor absorber air sponges for years and have yet to find an odor that they cannot eliminate.

Area of Coverage and Longevity

Under more severe chemical or odor conditions, expect the duration of the odor sponge to be reduced until it has had a chance to stabilize the ambient air in the room.

Environmental Air Sponge

The 8 oz. odor elimination sponge works great in rooms from 200 to 300 square feet with an 8 foot standard ceiling. Depending on the air quality, the sponge can last four to six weeks.

For Commercial Odor Control and Odor Removal Too!

The Environmental Air Sponge has been successfully utilized as an antidote for offensive odors and fume pollution in a variety of large scale commercial applications. Among others, it has been used in sewer gas treatment facilities, municipal bus and subway systems, commercial airlines, hotels, hospitals and the restoration of buildings damaged by fire and other disasters. Use the Environmental Air Sponge to help prevent Sick Building Syndrome!

How to Use the Environmental Air Sponge Odor Eater:

1. Break the security seal.
2. Remove the lid.
3. Place the container in the affected area. Do not place directly on heated surfaces (radiators) or in direct sunlight. Initially, the Environment Air Sponge will have a pleasant soap-like scent that dissipates after a few days.
4. Replace the Environmental Odor Absorber Air Sponge when the volume has reduced to 10% of its original size (roughly 4-6 weeks).

Tips for Maximum Efficiency

Place the container where there is some air circulation, ideally 4-6 feet high.

FOR AREAS WITH NO AIR CIRCULATION, (e.g. closets) direct a small fan into the affected area.

FOR CAR INTERIORS, place the open container under the seat.

FOR SMALL CONFINED AREAS, or to increase longevity, perforate the lid (e.g. 3 holes of approx. 2 cm).

FOR SEVERE PROBLEMS, turn AIR SPONGE upside down, out onto its lid, to maximize the product's surface exposure to contaminated air.

Use the remaining "hardened" product in your vacuum cleaner bags.
