

PRODUCT INFORMATION SHEET

GALAXY SYSTEM

The Galaxy System is a new concept for on premise laundries with OH&S and environment benefits.

FEATURES & BENEFITS

- All products are not classified as dangerous goods. No caustic or high strength bleaches are used.
- Low pH in wash is gentler on fabrics than high pH caustic products. This means fabrics last longer saving on replacement costs.
- Low pH ensures effluent complies with water authorities requirements for pH of waste water.

PRODUCT RANGE

The Galaxy System uses four products.

- Galaxy Break: A non caustic alkaline builder with high levels of water softening and soil dispersing agents. Galaxy Break softens water and boosts the pH levels for more effective cleaning.
- Galaxy Detergent: A blend of low-medium foam biodegradable detergents with added optical brighteners. The detergents in Galaxy Detergent are especially effective on oily and greasy soils.
- Galaxy Oxy Bleach: A hydrogen peroxide containing bleach safe on all normal washable fabrics both white and coloured.
- Galaxy Softener: Concentrated fabric softener with added sour to neutralise any residual alkalinity.

HOW & WHERE TO USE

- The Galaxy System is set up by Chesser technicians to dose the optimum amount of product into each wash.
